Glossary 6 - 2
Reference number guide 6 - 15

1	12 mm	Edge length of RACON 12
	16.2 mm	Mounting hole acc. to IEC 60947-5-1
	19 mm	Edge length of RF 19 (19.05) and KN 19 (18.8 x 37.8)
2	22.3 mm	Mounting hole acc. to IEC 60947-5-1
	27 mm	Mounting depth of RAFIX 22 FS contact block with quick-connect terminals
3	30.5 mm	Mounting hole acc. to IEC 60947-5-1
5	5.1 x 6.4 mm	Dimensions of MICON 5
8	8 mm	Mounting hole for the 8 mm pushbutton series, edge length of RACON 8
9	9.2 mm	is a RAFI-specific mounting dimension. With a mounting depth of 9.2 mm behind the front panel surface, the printed circuit board can be installed and carry RAFI components such as MICON 5, RACON 8, RACON 12, KN 19, RF 15, RF 19 and RAFIX 22 FS contact blocks.
	9.7 mm	Overall height (eventually with plunger) for RAFI short-travel keyswitches MICON 5, RACON 8, RACON 12, KN 19, RF 15, RF 19 for use under an overlay
A	Actuator	The component which is actuated mechanically by the operator. Actuators are always located on the surface of a machine.
	Ambient temperature	Temperature (°C) in the environment of the component.
	Assembly without tools	An assembly process performed without any auxiliary items.
	AS-Interface (ASI)	AS-Interface is a field bus at the lower field layer. The installation of AS-Interface components is very easy, saves assembly time and offers great flexibility of assembly.
	AS-Interface safety @ work	Safety protocol of AS-Interface for the transmission of safety-related input signals (e.g. emergency off or emergency stop).
	AWG - American Wire Gauge	A unit of measurement for thickness and diameter of solid and stranded wires.
B	Barred area	The area around a PCB component where no other components are allowed.
	Blanking cap	Used to cover mounting holes without function.
	Blister reel	A deep-drawn endless packaging type with a transparent cover strip used for automatic feeding of components to automatic SMD assembly machines.
	Breakdown voltage	The voltage (V, kV) that is necessary to cause current to flow through an insulator.
	Buzzers	A signalling unit generating an acoustic signal (piezo type).
C	Cage clamp terminal	A static contact for connecting a wire (by a self-locking spring) to integrate components into circuits.
	CE marking	A quality mark for devices complying with the European Low-Voltage Directive. The CE mark means that the device marked complies with all relevant requirements and standards. See also the glossary table.
	Change-over contact (CO)	Mechanically interconnected normally-open (NO) contact and normally-closed (NC) contact with a common potential.
	Class of protection to EN IEC 61058-1	Classifies electromechanical switching devices according to a table of categories for protection against electric shock by a non-conductive material.
	Click fixing method	For mounting pushbuttons from the front (LUMOTAST FK, LUMOTAST 25).
	Collar	The housing of an actuator.
	Collar shape	May exist in different designs; common collar shapes are round or square.

C	Colour coding to IEC/ EN 60073, IEC 60204 (VDE 0113 Part 1)	Red - Emergency (Warning of a potential hazard -> Immediate intervention required) Yellow - Abnormal condition (critical condition) Green - Normal condition (indicates safe operating conditions) Blue - Mandatory (action required) White - No special meaning Grey - No special meaning Black - No special meaning
	Contact block	Contact element for opening or closing a circuit. Contact blocks may contain several different potential-free contact chambers.
	Contact block product marking	See table in glossary.
	Contact chamber	The enclosed space around a switching contact.
	Contact resistance	The resistance (in mΩ) between two contacts with the circuit closed. The resistance between closed contacts (constriction resistance, surface contamination resistance, etc.).
	Contacts	Contacts are distinguished according to static and separable contacts. Static contacts include temporary or permanent connections (screw connections, solder connections, etc.). Separable contacts are referred to as switching contacts in circuits.
	Control component	Components designed to input commands on a machine. Control components have a modular design and therefore offer maximum flexibility with regard to the selection of the suitable input components.
	Conventional thermal current Ith EN IEC 60947-5-1	The maximum current (A) that a switching device can conduct without thermal overload for at least 8 hours.
	Creepage distance EN IEC 60947-1, DIN EN 61058-1	Describes the shortest distance (mm) between two conductive parts on the surface of an insulating material.
	CSA	Canadian Standards Association

D	Declaration of conformity	Declarations of conformity for all products concerned are available from us on request. Please specify the accurate order numbers of the specific products in your inquiry.
	Degree of pollution DIN EN 60947-1	A measure for the quantity of conductive or hygroscopic dust, gas or salt and the relative humidity which may cause a reduction of the dielectric strength of a switching device. The degree of pollution is described with four different levels for the definition of the ambient conditions.
	Degree of protection to EN IEC 60529	See table in glossary.
	Diffuser lens	A lens diffusing a light signal into many directions. Diffusers are used with signal lamps for visual indication from a distance and are not suitable for legending.
	Double gap	A contact type with two switching contact breaking points.
	Dupe-proof	A feature of emergency stop switches according to EN 60947-5-5. Dupe-proof means that the initiation of a component cannot be cancelled as soon as a certain point is reached when operated by an accumulated force.

E	Electric arc	A self-sustaining discharge phenomenon between two electrodes.
	Electrical operating life	The number of operations of a component at a defined electrical load.
	EMC	EMC = Electromagnetic compatibility The components listed in this catalogue are "elementary components such as switches, signal lamps, etc." according to the electromagnetic compatibility (EMC) legislation and are therefore not subject to the EMC legislation.
	Emergency off / Emergency stop	Emergency stop switches (EN 60947-5-5) are safety-relevant actuators with a mechanical latching function. Emergency stop switches can be used for the emergency stop function according to IEC EN 13850 and operate according to different stop categories (depending on the safety application).

E	Emergency off / Emergency stop	The following criteria apply according to the EC Machinery Directive: An emergency stop switch: - Must be ready to use at any time. - One actuation must result in immediate disconnection (shutdown). - Resetting an emergency stop switch must not initiate restarting. - The switching device must latch when pressed. - Unambiguous identification (red/yellow).
	ENEC approval	European approval mark for device switches according to IEC 61058-1. This European approval replaces all national approval marks in Europe, such as VDE, SEV, ÖVE, DEMKO, SEMKO, NEMKO, FEMKO and KEMA. Many RAFI products have already obtained approval according to the new standard, others are under preparation. Explanation of the ENEC ratings - Example: 25 T 85 (70) means: - Lower temperature: - 25 °C - Upper temperature: + 85 °C (without lamp) - Upper temperature: + 70 °C (with lamp)
	ESD strength	The dielectric strength (kV) of a component with static charge.
	Extension plunger	An accessory for short-travel keyswitches used for customizing the actuating face to obtain different areas and heights.
F	Filament lamp	A lamp, the light of which is generated by a hot filament wire. The wire is enclosed in a vacuum in order to prevent it from burning.
	Fixing nut	Used for fixing the device in the front panel.
	Fixing spanner	Assembly tool for optimum component assembly.
	Flammability class	Specifies the flammability of a product. For details, refer to table in glossary.
	Front ring	An exchangeable design element of RAFIX 22 FS and RAFIX 22 QR control components.
	Full-travel keyswitch	An electromechanical keyswitch with a travel from 1 to 5 mm optimised for quick data input.
G	Glow wire test / hot-wire ignition to IEC 60695-2-1	The test temperature of 850 °C means that these products can be used in devices designed for unattended continuous operation.
	Gold contact	Contacts used for switching low currents and voltages (signal level).
	Grid spacing	Defines the distance to the next adjacent component of the same type.
	Gullwing terminals	Solder terminals bent towards the outside, used for SMT components.
H	Hall technology	The Hall effect occurs in a current-carrying conductor located within a magnetic field, where an electrical field builds up which is perpendicular to the direction of current and to the magnetic field and which compensates the Lorentz force acting on the electrons. The Hall effect can be utilised for switching and positioning purposes. The switching method of the RS 76C is based on this technology.
	Handle	The handle of a selector switch used for turning and operating the switch.
	Housings alignable without gaps	Control components with a housing collar suitable for aligning without gaps make it possible to design an operating panel without gaps between the components. There is no clearance between the housings of the various actuators. This prevents accumulation of dirt.
I	IEC standard terms and definitions	See table in glossary.
	Illuminated pushbutton	Pushbutton which can be illuminated for visual signal indication.
	Illumination	Used for visual signal indication with illuminated pushbuttons, indicator lights, signal lamps, pushbuttons, etc. The illumination can be implemented with various luminous elements mounted either in sockets or permanently.
	Indicators	Components designed for giving a signal to the operator.
	Indicator light	A signal lamp indicating a status by lighting up or going out.

I	Insulation resistance DIN IEC 60512-2	The resistance (kΩ, MΩ) between different poles of an electromechanical contact and live parts.
J	J-lead	Solder terminals bent towards the inside, used for SMT components.
	JEDEC	Abbreviation of Joint Electron Device Engineering Council. The JEDEC Solid State Technology Association (in short, JEDEC) is a US organisation for the standardisation of semiconductors. One of its fields of activity is the definition of binding standards for soldering (example: JEDEC 20C soldering standard with RoHS conformity).
K	Keycap	The visible actuating area of a key; it is removable and may be suitable for legending, opaque, translucent or transparent.
	Keylock switch	A switching element provided with a priority function, where the key is used as the actuator.
	Keyswitch	A signal-generating switching unit closing (or opening) a circuit when operated. The circuit opens (or closes, respectively) after operation.
	KN 19	Short-travel main switch for low-profile data entry systems, overall height of RAFI KN 19: 9.2 mm
L	Label holder	Legend label modules which can be mounted separately for control components of the RAFIX 16 and RAFIX 22 QR series.
	Lamp	A luminous element with artificial light used for illumination.
	Lamp socket	An element which can accommodate a standard luminous element with a specific base.
	Latching	The contact remains in the switching position when operated once.
	Latching function	The contact remains in the switching position when operated once.
	LED	A light emitting diode used, for example, for indicating a signal status. LED's can be operated either with direct current (DC) or with alternating current (AC).
	LED clip	A special LED-type luminous element for RAFIX 22 FS control components that can be used with contact blocks with quick-connect terminals.
	Legending	Required to identify the effects of the specific input or output signal. Legending technologies used by RAFI: - Engraving - Hot stamping - Pad printing - 2-component spray painting - Laser engraving - etc.
	Lens	The part of a pushbutton which an operator touches directly. Lenses are provided with different colours to identify the effect of pressing the pushbutton.
	Locating pip	A projection provided for locating an actuator. Panel cut-outs complying with IEC 60 947-5-1 are provided with the matching groove, or indent.
	Luminous element	A term designating electric components emitting light.
	LUMOTAST	A brand name for RAFI pushbutton series that have been offered as mono-elements for more than 35 years. The current LUMOTAST series include LUMOTAST FK LUMOTAST 25 LUMOTAST 75
	LUMOTAST FK	An illuminated pushbutton and signal lamp product series suitable for mounting from the front and provided with a flat ribbon cable connection.
	LUMOTAST 25	An illuminated pushbutton and signal lamp product series suitable for mounting from the front, with a collar size of 25 x 25 mm and provided with a flat ribbon cable connection.
	LUMOTAST 75	An illuminated pushbutton and signal lamp product series suitable for mounting from the front for applications up to 250 V.
M	Make/break arc	An arc caused when making and breaking a contact, having a detrimental effect on the electrical operating life.
	Make current	The current flowing immediately after initial power-on and which may be a multiple of the rated current flowing later.

M	Marking	Marking is made in accordance with the Low-Voltage Directive 72/33/EEC or the CE Marking Directive 93/68/EEC in the shipping documents, on the packaging or on the product itself.
	Materials	See plastic materials.
	Mechanical operating life	Number of mechanical operations of a component.
	Momentary	Signal generation only when operated - (The circuit is kept closed or open as long as the device is operated.)
	Mono-element	Complete element consisting of actuator and contact block.
	Mounting depth	The space required for RAFI components behind the front panel. The mounting depth always includes the front panel thickness, which may vary.
	Mounting hole	A round or square opening in the front panel used for installing RAFI components. Mounting holes may be standardised, e.g. according to EN 60 947-5-1.
	Mushroom head	The actuating area of the mushroom pushbutton.
	Mushroom pushbutton	A pushbutton with an enlarged actuating area.
N	Neon lamp	A lamp, the light of which is generated by electrical discharge effects in thinned gas. These lamps offer the advantages of low heat loss, a long operating life and excellent shock resistance.
	Normally-closed contact (NC)	A contact breaking (opening) a circuit when operated (normally closed).
	Normally-open contact (NO)	A contact closing a circuit when actuated.
O	Opaque	Non-transparent material structure used, for example, with coloured lenses of pushbuttons (see also "Transparent" and "Translucent").
	Operating force	The force (N) which must be exerted on an actuator in order to be able to initiate the intended function.
	Operating point	The position in the switching process where the contact closes or opens.
	Operating temperature	Admissible ambient temperature range during operation.
	Operating torque	The force to be applied to input a command with a selector switch or keylock switch.
	Operating travel	The travel of a pushbutton, mushroom pushbutton, emergency stop button, etc. required for command input.
	Operations according to EN IEC 61058-1	Refers to the complete cycle of a logical change of state until back in the initial position.
P	Panel mounting sockets	Sockets for accommodating filament lamps and LEDs provided with a base.
	Plastic material	Housings, keycaps and lenses are exclusively made of thermoplastic or thermosetting plastic materials with excellent electrical characteristics, high impact resistance and high temperature resistance. We do not use any cadmium for surface protection of contact and connection elements and we only use cadmium-free plastic materials and asbestos-free filling materials. Cadmium-containing and cadmium-free plastics have the same technical characteristics. Equivalent quality is confirmed by the manufacturers. A limitation is the consistence of hue. In some cases it can be noticed by visual inspection. However, in general the difference can only be detected by measuring equipment.
	Positive opening operation according to EN IEC 60947-1	Describes the mechanical movement of a normally-closed contact which guarantees that the contact opens when the actuator is in the corresponding open position.
	Positively driven contact	

P	Potentiometer drive	An actuator of control components used for operating a potentiometer.
	Previous products	In this catalogue, we present the current RAFI product range. Many articles from previous product ranges are still available. Please contact your usual RAFI distribution partners.
	Priority keylock switch	Offers various functions with different keys.
	Pushbutton	Pushbuttons are actuators operated by pressing. Pushbuttons may have a momentary or latching switch function.
Q	Quick-connect terminals	A static contact for connecting a wire (by a quick-connect blade terminal for cable lugs) to integrate components into circuits.
R	RACON 8	RAFI short-travel keyswitch in square design with an edge length of 8 mm and sealed gold contact system.
	RACON 12	RAFI short-travel keyswitch in square design with an edge length of 12 mm and sealed gold contact system.
	RAFIX	The brand name of the RAFI control component series. The RAFIX brand is more than 40 years old. The current RAFIX generation includes the following series: RAFIX 16, RAFIX 16 F, RAFIX 22 FS, RAFIX 22 QR
	RAFIX 16	A complete control component series designed for a mounting hole diameter of 16.2 mm.
	RAFIX 16 F	A design-oriented control component series with a very low profile.
	RAFIX 22 FS	A control component series designed for a mounting hole diameter of 22.3 mm. Special characteristics of this series are: - Low mounting depth - Easy assembly - Compatibility with short-travel keyswitches
	RAFIX 22 QR	A complete control component series designed for a mounting hole diameter of 22.2 mm.
	Rated impulse withstand voltage (Ui) EN IEC 60947-1	A measure for the strength of the interior of a switching device to withstand rated impulse surge voltages (kV).
	Rated insulation voltage (Ui) EN IEC 60947-1	The voltage (V, kV) to which insulation tests and creepage distances refer. The maximum rated operating voltage must not be higher than the rated insulation voltage.
	Rated operating voltage (Ue) EN IEC 60947-1	The voltage (V, kV) to which insulation tests and creepage distances refer. The maximum rated operating voltage must not be higher than the rated insulation voltage.
	Rated operating current (Ie) EN IEC 60947-1	The amperage (A) a switching device may conduct, taking the rated operating voltage, the operating time, the usage category and the ambient temperature into account.
	Rated uninterrupted current (Iu) EN IEC 60947-1	The amperage (A) a device may conduct in continuous duty (for weeks, months, years).
	REACH - Registration, Evaluation, Authorisation and Restriction of Chemicals	A EU regulation for the registration, evaluation, authorisation and restriction of chemicals.
	Recommended colour coding to EN 60 204-1	See table in glossary.
	Reflow soldering	Reflow soldering is a soldering process for SMT components. A solder paste placed onto the printed circuit board or conductive film is molten by heat (infrared, vapour phase, laser or radiant heater) and subsequently hardened by cooling down to form a rigid connection with the component.

R	Resistance to climatic conditions	Maximum admissible temperature and humidity range
	RF 15	RAFI short-travel keyswitch series of square design with an edge length of 15 mm provided with gold or silver contacts and many different integrated illumination options.
	RF 19	RAFI short-travel keyswitch series of square design with an edge length of 19 mm provided with gold or silver contacts and many different integrated illumination options.
	RG 85 III	A modular short-travel system for elevator control, info terminals, vending machines, etc. The RG 85 III product series comprises pushbuttons, signal indicators and keylock switches.
	Ring nut	A threaded ring used for fixing the actuators.
	RK 90	Standard keycap system for use with RAFI short-travel keyswitches.
	RoHS - Restriction of Hazardous Substances	A EU regulation for the restriction of the use of certain materials in electrical and electronic devices.
	Rotary switch	A rotary switch is a special panel mounting pushbutton used for setting logical states by mechanical rotation. Different logical states are realized with specific rotating angles assigned.
	RS 74	RAFI full-travel keyswitch series with an operating travel of 2.5 mm.
	RS 76	RAFI full-travel keyswitch series with an operating travel of 4 mm.
S	Screw terminal	A static contact for connecting a wire (with a screw) to integrate components into circuits.
	Selector switch	Actuators used for selecting a certain condition. Selector switches are operated by turning and offer an unambiguous switching position indication.
	Selector switch with long handle	A selector switch with a larger handle which is used, for example, if operation is necessary wearing gloves.
	Shock resistance	Describes the ability of a switching device to withstand pulse-like impact movements without effect on the operating status and without suffering mechanical damage.
	Short-travel keyswitch	An electromechanical keyswitch with a maximum travel of 1 mm providing a distinct tactile feedback for the complete operating behaviour.
	Signal indicator	Components for visual status indication used with panel mounting pushbuttons (RG 85 III, RF).
	Signal lamps	Components indicating process states on machines by means of a visual signal.
	Silver contacts (Ag contacts)	Silver or silver/nickel alloy contacts are usually used for switching power levels >/= 1W and voltages >/= 12V.
	Single-handed assembly	The actuator inserted at assembly is kept in the panel cut-out by the cast-on seal. This makes it possible to pre-install all actuators from the front, even if minor vibrations occur. Subsequently you can complete mounting by tightening the ring nut without having to hold the components with your hand.
	SMT (Surface Mounted Technology)	SMT devices are provided with a soldering contact pad. They are soldered directly onto the surface of a printed circuit board.
	Solder heat resistance	Definition of the maximum admissible soldering time and temperature when soldering components with solder terminals.
	Solder terminals (etc.) EN IEC 61058-1	Contact points on a component used for connection to a printed circuit board by soldering.
	Spacer	Used to obtain a defined distance between the front panel and the printed circuit board (e.g. 9.2 mm – Front panel thickness = Spacer height).
	Spark distance EN IEC 60947-1, EN IEC 61058-1	The shortest distance (mm) in air between two conductive parts.
	Special sealing	A special wear-resistant seal used in some pushbuttons.
	Standard	A rule with a generally accepted binding nature.

S	Storage temperature	Admissible temperature range (°C) for storing a device.
	Switch	This term is often used as a generic term for electrical switching components. In contrast with pushbuttons, switches latch when operated once. To unlatch them, they must be operated again.
	Switching capacity	A parameter specifying the rated operating currents (Ie) as a function of the rated operating voltage (Ue).
	Switching contact	The purpose of switching contacts is to switch on circuits, conduct currents, switch off circuits and ensure insulation when the circuits are open.
	Switching device	General term used for single components for opening / closing circuits.
T	Tactility	Tactile feedback
	Terminals	Specifies the way a switch is connected to a circuit or device to switch. Available types are screw terminals, solder terminals, PCB mounting pins, stranded wires, wire-wrap terminals and a large selection of male and female connectors.
		Static contacts for connecting RAFI components with wires, conductor tracks, etc. Static contacts can be designed as removable contacts (screw, quick-connect, cage clamp terminals, etc.) or permanent contacts (solder, welding contacts, etc.).
	THT (Through Hole Technology)	Through hole technology involves inserting the components through the PCB holes and joining them with special THT soldering processes (wave soldering, manual soldering).
	Tightening torque (Nm)	A measure for the torsional effect of a force (N) acting on a rotary object.
	Toggle switch	Actuator indicating the switching status by the lever position.
	Tool	An auxiliary item used for assembly.
	Torque (Nm)	A measure for the force acting on a rotary object.
	Translucent	Light-transmitting material structure used for large-area diffused (sometimes coloured) illumination.
	Transparent	Light-transmitting material structure, sometimes also with a colour shade, e.g. for diffuser lenses.
	Twin pushbutton	Two separate pushbuttons on one switching unit (mounting hole, coupling)
U	UL	Underwriters Laboratories (US approval organisation)
	Units of measurement	All dimensions in this catalogue are given in mm. For conversion tables for various units of measurement, see glossary.
	Usage categories to IEC 60947-5-1 [120 -230V]:	Alternating current [AC]: AC-12 Control of resistive loads and solid-state loads with isolation by optocouplers. AC-13 Control of solid-state loads with transformer isolation. AC-14 Control of small electromagnetic loads (< 72 VA). AC-15 Control of electromagnetic loads (> 72 VA). Direct current [DC]: DC-12 Control of resistive loads and solid-state loads with isolation by optocouplers. DC-13 Control of electromagnetic loads. DC-14 Control of electromagnetic loads having economy resistors in circuit.
V	VDE	Verband Deutscher Elektrotechniker – Association of German Electrical Engineers (German approval organisation)
W	Wave soldering	Process for lead-free and lead-involving soldering standardised in E DIN EN 60068-3-20.

Previous products

Our catalogue presents the current RAFI product range. Many articles from previous product ranges are still available.
Please contact your usual RAFI partners.

Legending

Legending is possible using ready-made legend inserts, by engraving, printing or hot stamping. Grooved transparent lenses are not suitable for legending.

CE conformity

The CE conformity information for the individual products is specified in the general information section of each individual chapter. With regard to CE conformity, the products listed in this catalogue can be subdivided according to the following groups based on the Low-Voltage Directive 73/23/EEC:

Emergency stop components with an operating voltage > 50 V
For example, RAFIX 16, 22 QR. These products are subject to the Low-Voltage Directive 73/23/EEC and the Machinery Directive 89/392/EEC.

Emergency stop components with an operating voltage < 50 V
For example, LUMOTAST 25 and RAFIX 16 with gold contacts. These products are subject to the Machinery Directive 89/392/EEC.

All other products with an operating voltage > 50 V
For example, LUMOTAST 75 pushbuttons, signal lamps. These products are subject to the Low-Voltage Directive 73/23/EEC.

All other products with an operating voltage < 50 V
For example, RACON, LUMOTAST 25, signal lamps with LED. These products are not subject to any European directive.

Single parts, accessories and luminous elements
These products are not subject to any European directive.

EMC legislation

The components listed in this catalogue are "elementary components such as switches, signal lamps, etc." according to the electromagnetic compatibility (EMC) legislation and are therefore not within the scope of the EMC legislation.

ENEC approval

European approval mark for switches for appliances according to IEC 61058-1.

This new European approval mark replaces all national approval marks in Europe, such as VDE, SEV, ÖVE, DEMKO, SEMKO, NEMKO, FEMKO and KEMA.

Many RAFI products have already obtained approval according to the new standard, others are under preparation.

Explanation of the ENEC ratings
Example: 25T 85 (70)

Lower temperature:	- 25 °C
Upper temperature:	+ 85 °C (without lamp)
Upper temperature:	+ 70 °C (with lamp)

Recommended colour coding acc. to EN 60 204-1

1. Colours
Pushbutton actuators must be marked with 2 colours in accordance with table 2.

Colours for START/ON actuators should be WHITE, GREY or BLACK, preferably WHITE. GREEN is also permitted. RED must NOT be used.

RED must be used for actuators provided for stopping in an emergency situation and for switching off in an emergency situation.
Colours for STOP/OFF actuators should be BLACK, GREY or WHITE, preferably BLACK. GREEN must NOT be used. RED is also permitted, however, it is recommended to avoid RED in the vicinity of components provided for emergency actions.

WHITE, GREY or BLACK are the preferred colours for pushbutton actuators with alternating START/ON and STOP/OFF function. RED, YELLOW or GREEN must not be used.

WHITE, GREY or BLACK are the preferred colours for pushbutton actuators initiating a function while being pressed and stopping the function when released (e.g. inching operations). RED, YELLOW or GREEN must not be used.

Resetting pushbuttons must be BLUE, WHITE, GREY or BLACK. In those cases where they also perform a STOP/OFF function, the preferred colours are WHITE, GREY or BLACK, with BLACK being the first choice. GREEN must NOT be used.

Recommended colour coding to EN 60 204-1

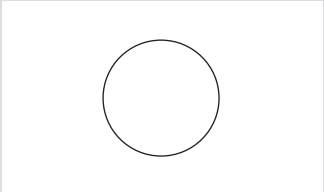
Table 2: Colours for pushbutton actuators and their meanings

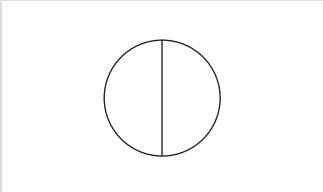
Colour	Meaning	Description	Examples of application
RED	Emergency situation	Actuate in a dangerous or emergency situation.	Emergency stop. Initiate emergency functions
YELLOW	Abnormal condition	Actuate if an abnormal condition occurs	Intervention to suppress an abnormal condition. Intervention to resume an interrupted automatic sequence.
GREEN	Normal condition	Actuate to initiate normal conditions	
BLUE	Mandatory action	Actuate in a situation which requires a mandatory action	Resetting function
WHITE	No special meaning defined	General initiation of functions except emergency stop (see note below)	START/ON (preferred) STOP/OFF
GREY			START/ON STOP/OFF
BLACK			START/ON STOP/OFF (preferred)

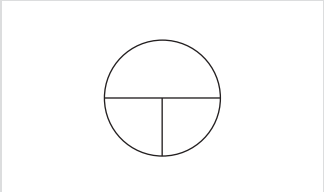
NOTE: If an additional coding feature (e.g. shape, position, surface finish) is used for marking pushbutton actuators, the same colours – WHITE, GREY or BLACK – may also be used to identify different functions (e.g. WHITE for START/ON and STOP/OFF actuators).

2. Symbolic marking

It is recommended to mark pushbuttons with the following symbols near the actuator or – preferably – directly on the actuator in addition to the functional identification described:

START or ON	STOP or OFF	Pushbuttons with alternating START/STOP and ON/OFF function.	Pushbuttons with START or ON function while being pressed and with STOP or OFF function when being released (i.e. inching).
60417-IEC-5007	60417-IEC-5008	60417-IEC-5010	60417-IEC-5011
			






Recommended colour coding to EN 60 204-1

3. Indicator lights and indicators

Applications
Indicator lights and indicators are used to provide the following information:
– Indication: To draw the operator's attention to a specific circumstance or to indicate that a specific action should be performed. The usual colours used for this type of application are RED, YELLOW, GREEN or BLUE.
– Confirmation: To confirm a command or condition, or to confirm the end of a change operation or transition time. Usually, BLUE and WHITE are used for this type of application; GREEN is permitted in some cases.

Colours
Indicator lights must have the colour coding according to table 3 unless otherwise agreed between the supplier and the purchaser. Other meanings deviating therefrom (refer to IEC 60073) may be assigned based on one of the following criteria:
– Safety of persons and environment
– Condition of the electrical equipment

Table 3: Colours of indicator lights and their meanings relating to the machine status

Colour	Meaning	Description	Operator action
RED	Emergency situation	Dangerous condition	Immediate action to respond to a dangerous condition (e.g. by pressing emergency stop)
YELLOW	Abnormal condition	Abnormal condition; anticipated critical condition	Monitoring and/or intervention (e.g. by restoring the intended function)
GREEN	Normal condition	Normal condition	Optional
BLUE	Mandatory action	Indication of a condition requiring operator intervention	Mandatory action
WHITE	Neutral	Other conditions; may be used if there is uncertainty about the appropriateness of RED, YELLOW, GREEN or BLUE	Monitor

Flammability rating to UL 94

identical with IEC 60707/VDE 0304, Part 3

Flammability
The flammability class specifications refer only to insulating materials which are in direct contact with electrically conductive parts. The flammability of the material with the lowest rating is specified.

Flammability class acc. to		Self-extinguishing after . . . seconds in vertical burning test	Possibly dripping material ignites objects	No more smouldering after . . . seconds
UL	IEC/VDE			
V 0	FV 0	Less than 5 seconds	No	30 seconds
V 1	FV 1	Less than 25 seconds	No	30 seconds
V 2	FV 2	Less than 25 seconds	Possible	60 seconds
HB	FH	Burn rate (horizontal burning test with the following values): Wall thickness up to 3 mm = 3 inches/minute, max.; wall thickness over 3 mm = 1.5 inches/minute, max.		

Glow wire test

The test temperature of 850 °C means that these products can be used in devices designed for unattended continuous operation.

IEC concepts/standards

IEC 60947-5-1
Low-voltage switchgear and controlgear
Part 5-1: Control circuit devices and switching elements, electromechanical control circuit devices
└→ DIN EN 60947-5-1
└→ VDE 0660, Part 200

IEC 60947-5-5
Low-voltage switchgear and controlgear
Part 5-5: Control circuit devices and switching elements, electrical emergency stop device with mechanical latching function
└→ DIN EN 60947-5-5
└→ VDE 0660, Part 210

IEC 60204/-1
Electrical equipment of machines
Part1: General requirements
└→ DIN EN 60204-1
└→ VDE 0113, Part 1

IEC 60529
Degrees of protection by housings
└→ DIN EN 60529
└→ VDE 0470, Part 1

IEC 61058/-1
Device switches
Part 1: General requirements
└→ DIN EN 61058-1
└→ VDE 0630, Part 1

CURus
Approval label for the U.S.A. and Canada – tested by UL – acc. to UL 508 and CSA C22.2 14-M91

CSA "NRTL/C"
Approval label for Canada and U.S.A., tested by CSA – acc. to CSA C 22.2 14-M91 and UL 508

Marking

Marking is made in accordance with the Low-Voltage Directive 73/23/EEC or the CE Marking Directive 93/68/EEC in the delivery papers on the packaging or on the product itself.

Declarations of conformity

Declarations of conformity for all products concerned are available on request. Please specify the accurate order numbers of the specific products.

Plastic materials

Housings, keycaps and lenses are exclusively made of thermoplastic or thermosetting plastic materials with excellent electrical characteristics, high impact resistance and high temperature resistance.
We do not use any cadmium for surface protection of contact and connection elements and we only use cadmium-free plastic materials and asbestos-free filling materials.
Cadmium-containing and cadmium-free plastics have the same technical characteristics. Equal quality is confirmed by the manufacturers. A limitation is the consistence of hue. In some cases it can be noticed by visual inspection. However, in general the difference can only be detected by measuring equipment.

Units of measurement

All the dimensions in the dimensional drawings in this catalogue are given in mm. All temperature values are given in degrees Celsius. A conversion table for the most common units of measurement is provided below for your convenience:

Conversion table:

mm	x 0.0394	= inches
grams	x 0.0353	= ounces
Newton	x 0.224	= pounds
Newton	x 3.59	= ounces
°Celsius	x 1.8 + 32	= °Fahrenheit

Contact block identification data

Example: RAFIX 22 QR 1.20.124.xxx/5.00.100.1xx

Rated values to IEC 61058-1

10/100(6)[3,6] 250 ~ 7.5 (4) 400 ~
5E4 25T70

Explanation of data from left to right, current-related data first

10 or 7.5
10A ohmic load at 250V, 7.5 A ohmic load at 400 V

100
100A capacitive peak input current (tested at 250V) (descending E-function to rated current)

(6) or (4)
6A motor rated current at 250V, 4A motor rated current. The test specimen makes 6 times the motor rated current, 36A or 24A, cos phi = 0.6, ≙ 9000 or 9600 VA at 400 V throughout the full durability test.

[3,6]
3.6A filament lamp rated current = 36A peak input current (tested at 250V)

250 AC or 400 AC
Rated voltages and mains type, ~ = AC

5E4
50,000 operations (no. of test cycles) ≙ 5 x 10^4

25T70
-25°C lower operating temperature and + 70°C upper operating temperature
The first 25,000 operations were tested at +70°C, the remaining 25,000 operations at -25°C in all of the tests.

CURus ratings
A 600, 10A/250Vac

A 600
Thermal continuous test current 10A
Max. permitted load in VA:
Max. 7,200VA make, 720VA break

Max. make values:	Max. break values:
60A/120V	6A/120V
30A/240V	3A/240V
15A/480V	1.5A/480V
12A/600V	1.2A/600V

10A/250Vac
Ohmic AC load

Rated values to IEC 60947-5-1
U 400 V AC12 10A, AC 15 6A/250V
DC13 Q 300

U 400V
Rated insulation voltage for use in devices designed for continuous duty and degree of contamination 3

AC12 10A
10A ohmic load and semiconductor load

AC15 6A/250V
Controlling electromagnetic loads
Max. 60A cos phi = 0.3 at 250V AC make, 6A cos phi = 0.3 at 250V AC break

DC13 Q 300
Controlling solenoids (DC)
Maximum thermal continuous current 2.5A
Max. 0.55A at 120V – make and break
Max. 0.27A at 250V – make and break

Degrees of protection to IEC 60529

The degree of protection specified for the individual components refers to those parts of the components located on the front side of the panel. The electrical terminals are not protected unless they are provided with special protection means such as cable sleeves, insulating sleeves or similar elements during assembly. The degrees of protection are standardised according to IEC 60 529 as follows:

IP X

1st numeral	Protection against electric shock and ingress of foreign bodies:
0	No protection
1	> 50 mm diameter; protection against accidental touching with a hand
2	> 12 mm diameter; protection against touching with fingers
3	> 2.5 mm diameter; protection against touching with tools
4	> 1 mm diameter; protection against touching with wires
5	and effects of dust deposits. Full-scale protection against voltage
6	and penetration of dust (dust-proof). Full-scale protection against voltage

X

2nd numeral	Protection against ingress or harmful effects of water:
0	No protection
1	Dripping water, vertical
2	Dripping water, up to 15° angle
3	Spraying water, up to 60° angle
4	Splashing water from all directions
5	Water jets from all directions
6	Strong water jets from all directions
7	Temporary submersion
8	Continuous submersion
9K	Protected against water from all sides under high pressure (high pressure/steam jet cleaning with 80 – 100 bar)

UL standard

for RAFI short-travel keyswitches
The KN 19 short-travel main switch and those operating panels fitted with RAFI RACON and RF short-travel keyswitches in accordance with our design recommendations comply with the UL standards for the North American market.
File no. for KN 19: E 116 362
File no. for systems: E 202 520
